## CMSLIM

CMSLIM is the most advanced and intensive electric muscle stimulator.

Focused electromagnetic field effectively stimulate the muscle, providing muscle contractions which is ideal for muscle growth, and also burning fat.

Two applicators are placed on the target muscle area, such as your abs,

thighs, or buttocks. The applicators then generates dynamic electromagnetic fields that causes involuntary muscle contractions.

### Effect on Fat

Several recent studies using CT, MRI and ultrasound evaluations have reported approximately 19% reduction in subcutaneous fat layer in patients treated by HI-EMT based device on their abdomen.

## Session Information

CMSLIM's treatment session requires no anesthesia, incisions, or discomfort. Infact, patients are able to sit back and relax, while the device performs the equivalent of more than 20,000 painless crunches or squats.

Single treatment session takes 30 minutes only, and there is no downtime. 2-3 treatments per week, would be enough for perfect result for most people. Generally, 4-6 treatments recommended.

## Workout Program

CMSLIM's unique workout program consists of a series of an actual physical training program, which has been ideally designed for the maximum stimulation leading to the best result.

Additionally, CMSLIM is an extremely efficient treatment that takes place over the course of 10-14 days, rather than months, and it also produces a more toned abs and uptight buttocks within two-to-four weeks.

### Effect on Muscle

Recent studies reported that on average 15% - 16% increase in abdominal muscle thickness was observed in treated patients one to two months after treatments.
